## DETAILED ACTION

### *Specification*

The lengthy specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

### *Claim Rejections - 35 USC § 102*

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-5, 7-15, and 17-21 are rejected under 35 U.S.C. 102(b) as being anticipated by Kunida (JP 2002-202595 in view of its English language machine translation).

Kunida disclose a photopolymerizable planographic printing plate comprising a photosensitive layer coating on a hydrophilic support. The photosensitive layer comprises a photoinitiator having a halogen content including compounds of the aromatic ketone, onium salt, organic peroxide, thio compound, hexaaryl biimidazole, borate (x-8 in the examples), or metallocene (titanocene [x-7 in the examples]; iron – arene; [0036], page 7, c12) type, and compounds having a carbon halogen association (see formulas 14-16 on page 12/ column 21). Compound X-3, meets the limitations of the instant formula 1, and is employed in several of the examples. These compounds may be used singly or in combination. The preferred monomers meet the limitations of the instant claims 1—3, and 10-13 (see pages 57-61). Also employed in

Art Unit: 1752

the layer are dyes meeting the instant claim limitations. The layer also comprises infrared absorbing dyes and colorants (such as carbon black), which are light to heat conversion agents (see page 30).

***Claim Rejections - 35 USC § 103***

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 6 and 16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kunida.

Kunida has been discussed above, and while the reference teaches that iron-arene compounds may be employed in combination with other photoinitiators listed, the reference does not use such a compound in a preferred embodiment.

However, given the teachings of the reference, it would have been obvious to one of ordinary skill in the art to prepare the material of Kunida choosing to employ an iron-arene compound, with reasonable expectation of achieving a material having high sensitivity.

***Conclusion***

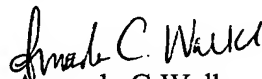

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Kunida (JP 2002-202596) and Oshima et al (JP 2002-221798) are cited for their teachings of similar compounds.
